Dean, Faculty of Health Sciences
Director of Planning

Dr. David Walker
Paul Rosenbaum

The Faculty of Health Sciences consists of the School of Medicine, the School of Nursing, the School of Rehabilitation Therapy and the Life Sciences program at Queen's University.

Our mission is to educate health professionals and students in the biomedical sciences by conducting research, by generating a spirit of enquiry, and by serving the health needs of the people of Southeastern Ontario, drawing on Queen's learning environment to enable our graduates to become the leading health professionals for Canada's rural, northern, and urban communities and to provide researchers and educators for the nation's future.

Partners in Advancing Health Care

The Faculty of Health Sciences is particularly proud of its close relationship and affiliation with a variety of health providers. Central to the achievement of our mission are our very special relationships with Kingston General Hospital, Hotel Dieu Hospital and Providence Continuing Care Centre, teaching hospitals which provide the full range of secondary and tertiary services through the acute to chronic long-term and complex continuing care for a population base between 500 thousand and a million people.

The Southeastern Ontario Health Sciences Centre is a formal affiliation of these teaching hospitals, the University, the Community Care Access Centre, the Teaching Health Unit and others.

Of growing importance is our increasing dependence on institutions throughout the region of Southeastern Ontario, as our students of all sorts and levels of training participate in the care of patients in clinics, practices and institutions stretching from Peterborough to Brockville, and from Kingston to Moose Factory. These partnerships form the bedrock of superb care to patients, the opportunity to educate future health professionals and the infrastructure within which significant new discoveries can be made.
